TRANSITION GUIDE

Eat Well. Live Well.

CAMBROOKE[™]

GLYTACTIN RTD was the first ever Ready-To-Drink GMP-based PKU formula!

Cambrooke is committed to helping you succeed during your transition from your current Glytactin RTD 10 to our new and improved formulation. We understand change is never easy especially when it comes to your PKU formula.

After 11 years of working with GMP and in keeping with our mission to offer tasty, innovative, and nutritious products, we are launching our second generation RTD. Cambrooke always strives for better for our families. We think you'll be happy with these following changes:

- ✓ Lower Phe with **GMPure**. 45% less Phe
- ✓ 75% less added sugar
- ✓ Added DHA
- ✓ Optimized bone health blend
 - ✓ Increased Vitamin D
 - ✓ Added Vitamin K2 to help build bone structure

Your transition kit contains 4 cartons of the new GLYTACTIN RTD 10 formula ... so you can try it your way!

Quick Switch:

- Calories and protein equivalents are the same in the new RTD 10. Give the new RTD 10 a try and see what you think.
 - Example: If you drink 2 RTD 10 daily, continue to drink 2 new RTD 10 daily.

Make sure to try the new RTD 10 just like you drink your current RTD 10:

- If you make a smoothie, make it with the new RTD 10.
- If you add flavoring, add it to the new RTD 10.
- If you drink RTD 10 cold, make sure the new RTD 10 is cold.

Taking it slow:

- If you do not immediately like the new RTD 10 on its own, try mixing one of your old RTD 10s with a new RTD 10 for a slower change. This mix can be refrigerated for up to 24 hours.
- Consider trying a different flavor?
 - RTD 10 is available in Original and Chocolate.
 - RTD Lite 15 is available in Vanilla and Coffee Mocha if this fits your formula needs.

Just shake, drink...tell us what you think!
