CAMBROOKETM

TYLACTIN RTD was the first ever Ready-To-Drink GMP-based TYR formula!

Cambrooke is committed to helping you succeed during your transition from your current Tylactin RTD 15 to our new and improved formulation. We understand change is never easy especially when it comes to your TYR formula.

After 11 years of working with GMP and in keeping with our mission to offer tasty, innovative, and nutritious products, we are launching our second generation RTD. Cambrooke always strives for better for our families. We think you'll be happy with these following changes:

- ✓ Added sugars reduced by > 75%
- ✓ Added DHA
- ✓ Optimized bone health blend
 - ✓ Increased Vitamin D
 - ✓ Added Vitamin K2 to help build bone structure

Our transition kit contains 3 cartons of RTD Original and 1 carton of our new RTD Chocolate.

Quick Switch:

- Calories and protein equivalents are the same in the new RTD 15. Give the new RTD 15 a try and see what you think.
- Example: If you drink 3 RTD 15 daily, continue to drink 3 new RTD 15 daily.

Make sure to try the new RTD 15 just like you drink your current RTD 15:

- If you make a smoothie, make it with the new RTD 15.
- If you add flavoring, add it to the new RTD 15.
- If you drink RTD 15 cold, make sure the new RTD 15 is cold.

Taking it slow:

- If you do not immediately like the new RTD 15 on its own, try mixing one of your old RTD 15s with a new RTD 15 for a slower change. This mix can be refrigerated for up to 24 hours.
- Consider trying a new flavor?
 - Tylactin RTD is also now available in chocolate. For your convenience, we have included one to try.

Just shake, drink...tell us what you think!
